

# 40-FT Container Insulation Kit nr. 3 full height

Thousands of tonnes of cargo have been carried, ranging from butter and cheese in the summer to liqueurs and confectionery in the winter months. Generally, the insulation material offers a satisfactory economics choice between:

- Using a dry freight container which cannot maintain the cargo temperature for a given transit time.
- Using an insulated container where positioning, and hire costst will make it uncompetitive.

- 40-FT full height installation instructions.
- Gebrauchsanweisung für Isolierfolie 40-FT volle Höhe.

In many cases, the use of insulation material has enabled cargoes which has previously used refrigerated containers to be more economicly shipped using dry freight containers.

## Application

The kits are supplied with material cut to length and double-sided tapes ready for application. The sequence for installation is as follows

- Instrukties voor het aanbrengen van isolatie over de volledige hoogte van een 40 FT-container.
- Instructions d'installation sur toute la hauteur d'un conteneur 40-FT.
